

Access Roads & Airstrips

Nothing happens in the Arctic without a dependable means of supply. That's where Nuna comes in. With specialized knowledge of northern operations, we construct and maintain the all-weather and ice infrastructure needed for continuous, cost-efficient operations in Northern Canada's most isolated regions.

Backed by experience, we've built the majority of all-weather and ice access roads, project site roads, and runways in Nunavut and the Northwest Territories. The size and reliability of our fleet, the skills of our personnel, and our intimate knowledge of Arctic weather and soil conditions make it possible to construct essential infrastructure even in the harshest conditions. We carry this Northern expertise to remote locations outside the Northern Territories—facilitating the development of essential site infrastructure across Canada.
