

Mobile Crushing & Screening

Since the first diamond discovery in Canada, Nuna has supplied the majority of Nunavut's and the Northwest Territories' mine developments with vital crushing services and site infrastructure construction—all while continuing to expand into other regions across Canada.

By employing our complete crushing plants, we've crushed natural esker or recycled mine pit waste rock, and we've blasted rock for the construction of runways, site access roads, dam and dike material, and pads for camps, shops, and tank farms. Our team has a wide range of experience in meeting the highly technical manufactured product specifications required by our clients.
