

# Reclamation & Remediation

**Nuna translates to “land” in Inuktitut. As a company, Nuna understands the importance of restoring the land to its natural state once operations are complete.**

We adhere to strict environmental regulations that govern the reclamation of mine sites, including the handling of hazardous materials such as hydrocarbon contaminated soils and reagents, tailings reclamation, and site rehabilitation. Our site-specific procedures are based on our Integrated Health, Safety, and Environment Management System.

With decades of experience, we've worked on a range of projects. We've been involved at the Giant Mine site since 2005. In 2022, we successfully completed a multi-year remediation project at the abandoned Gunner Mine Site in Northern Saskatchewan. In the same year, we were awarded a multi-year remediation contract by De Beers Canada at Snap Lake Diamond Mine in the Northwest Territories.
