

Site Excavation & Earthworks

Since 1993, Nuna has moved millions of cubic metres of material through site clearing and earthworks activities for the construction of site infrastructure.

Our diverse and versatile construction fleet gives us the capacity to address a full spectrum of site excavation and earthworks activities. The flexibility of our equipment fleet provides fit-for-purpose solutions—ones that address small-scale construction scopes and buried utilities installations through to large-scale open pit mining using ultra-class equipment.
